

OCTOBER 2020

MISSION: SUCCEED !

CONTEXT:

New feature for Egyptian Rafale fleet

Our project manager came back from a week of training and installation of the BTE (Role Test Bench) update in Egypt for Rafale users.

In order to use their new refueling feature, the pylon and the nacelle need to be tested and configured before operation. Our BTE bench is designed to be modular and to adapt to these new features.

Following the sales of Rafale Fighters for Egypt, the fleet has been recently equipped with N220B Safran nacelles allowing in-flight refueling. SECA provides Dassault and their customers with test and configuration benches, especially for their carriage systems (pylons, nacelles...).
